

---

You may type the words you'd like to have as Anki cards and the program will show you the best words it can find. Use the keyboard shortcuts in the right corner of the dialog window to change the search words or to add words to the displayed database. (This function requires your computer to have a working keyboard.) The Ewing2Anki tool uses the popular ANKI language for storing and retrieving words, but you may use any text file, including a plain text or comma-separated text file (easily created by opening a text file in any text editor). To make the best use of Ewing2Anki's capabilities, there are two methods to create the cards: 1. Auto-mode: The Ewing2Anki tool uses all available dictionaries and corpus data to get all the best words for a given search term. To use it, just press the "Auto-mode" button in the bottom left corner of the Ewing2Anki dialog and enter a search term and a Japanese phrase. For example: "Giraffe Anki card" (searches for giraffe and any of the J-E dictionaries that can be used for search) or "Animal Anki card" (searches for animal and the J-E dictionaries in the selected set). 2. Manual mode: Use this mode to create cards manually. It's useful to create new cards, add words to the list of target words, or update a database with a whole bunch of words at once. To enter this mode, press the "Manual mode" button in the bottom left corner of the Ewing2Anki dialog and enter a search term and a Japanese phrase. For example: "Giraffe Anki card" (searches for giraffe and any of the J-E dictionaries that can be used for search) or "Animal Anki card" (searches for animal and the J-E dictionaries in the selected set). If a dictionary search is completed successfully, you'll get a list of all best words that are available for that search term. You may use the keyboard shortcuts in the right corner of the dialog window to choose one of these best words. If a dictionary search is unsuccessful, the program will show you all available words (both best and others) that have to be imported. For
